SEEING THINGS DIFFERENTLY

Addressing Stigmas Through Research

What do poop, drug addiction, Alzheimer’s dementia, breast cancer, sexuality, and depression have in common?

These topics are often stigmatized in society. This seminar addresses the science behind these taboos and examines how society creates these stigmas through images, texts, stories, and research.

Tu/Th 2:30-3:45 Emerson Hall 401

For more information: order.emory.edu
This ORDER course offers freshmen a behind-the-scenes look at an array of research going on at Emory. The title “Flowkeyroads/Braincer,” reflects the “mashup” of research approaches that will be surveyed. Every other week, students will explore a new topic first-hand, including trips to laboratories, the Yerkes Primate Center and to a rail yard. As a final project, students will create their own research mashups, crossing disciplinary boundaries to ask - and begin to answer - important research questions of their own. See below for a sample of research topics to be explored. For more info, go to www.order.emory.edu.

RESEARCH TRACK LIST

A DATE: T TH 1:00-2:15  B DATE: FALL 2014
N.R. YES NO

1. The surprising FLOW behavior of soft materials

2. Social cognition of rhesus monKEYs

3. The cultural history of American railROADS

4. How BRAIN systems interact to form memories

5. Biological and social complexities of canCER drug development

6. Novel approaches for the treatment of canCER
